An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Paul Davis on November 7, 1996.

The application has been amended as follows:

Claim 1 has been rewritten as follows-

15.
1. An ablation treatment apparatus, comprising:

a multiple antenna device including a primary antenna with a longitudinal axis, and a secondary antenna coupled to the primary antenna and configured to be deployed at least partially in a lateral direction relative to the longitudinal axis with at least one radius of curvature, wherein a distal end of the primary antenna is sufficiently sharp to pierce tissue, and the primary and secondary antennas are configured to provide a selectable geometric ablation of a selected tissue mass;

an insulation sleeve positioned on an exterior of the primary antenna; and
one or more cables coupled to the multiple antenna.

Art Unit: 3311

Claim 31 has been rewritten as follows:

31. An ablation apparatus comprising:

C2 a multiple arm device including a primary arm and a longitudinal axis, and a secondary arm coupled to the primary arm and configured to be deployed in a direction that is lateral to the longitudinal axis with at least one radius of curvature, wherein a distal end of the primary arm is sufficiently sharp to pierce tissue;

an energy source; and

one or more cables coupling the energy source with the multiple arm device.

Claim 47 has been rewritten as follows:

47. An ablation treatment apparatus, comprising:

C3 a multiple antenna device including a primary antenna with a longitudinal axis, and a secondary antenna coupled to the primary antenna and configured to be deployed at least partially in a lateral direction relative to the longitudinal axis with at least one radius of curvature, wherein a distal end of the primary arm is sufficiently sharp to pierce tissue, and the primary and secondary antennas are configured to provide a selectable geometric ablation of a selected tissue mass;

an insulation sleeve positioned on an exterior of the primary antenna;

an energy source; and

one or more cables coupling the energy source to the multiple antenna device.

Art Unit: 3311

The following is an examiner's statement of reasons for allowance: as amended, the claims set forth a multiple arm device whereby a primary arm is capable of penetrating tissue and a secondary arm is deployed therefrom in a lateral direction with a radius of curvature. The arms are coupled to an energy source to provide ablative energy to a selected tissue mass via the primary and secondary arms.

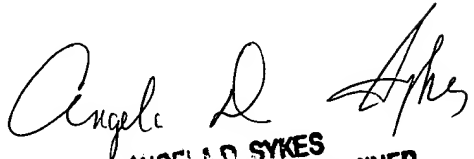

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
